

Create a new Power BI Desktop file, and if you haven't already done so, run the SQL script in the above folder to create a database of Make-a-Mammal data.

From this database load the following tables:

- **tblCentre**
- **tblCentreType**
- **tblPurchase**

Create the following bubble chart!

Here we're in the middle of playing the chart - we've reached 2012. The printed page doesn't do justice to the tackiness of the bubbles shooting around the chart!

Save this as **Just bubbles**, then close down the Power BI instance.
