

Open the report in the above folder:

*The report contains data on rail station passenger numbers (excluding interchanges) for 2017-18.
It's not just Power BI you're learning ... !*

Remembering to summarize by the **Latitude** and **Longitude** fields (and not average them, as will happen by default) create an ArcGIS heat map showing that - as always - London dominates everything:

For bonus points, add a pin showing your home location (the one above shows Wise Owl's HQ).

Save this report as **London calling**, then close it down.
