

Create a new Power BI file, and from the above folder load the Excel workbook containing a list of the Disney Princesses.

Hide a couple of columns that we're not interested in, so that the field well looks like this:

*You should hide the First appeared and Vehicle fields.*

Create a table showing the number of films by feminist rating:

Princesses by rating	
Feminist rating	Count of Name
Feisty	2
Role model	3
Drippy	4
No idea	4
Total	13

*You'll need to change the summarisation option to do this.*

Save this Power BI file with the name **Not exactly the Spice Girls**, then exit this instance of Power BI Desktop.
