

Open the Power BI report in the above folder. It contains 3 pages:

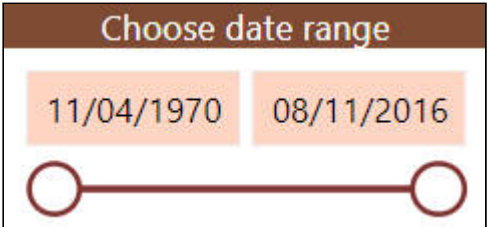

Page	Contents
Choices	Empty
By decade	A chart comparing the number of world events by decade
List of events	A table listing all of the events in the underlying tables

On the empty **Choices** page, add the following slicers:

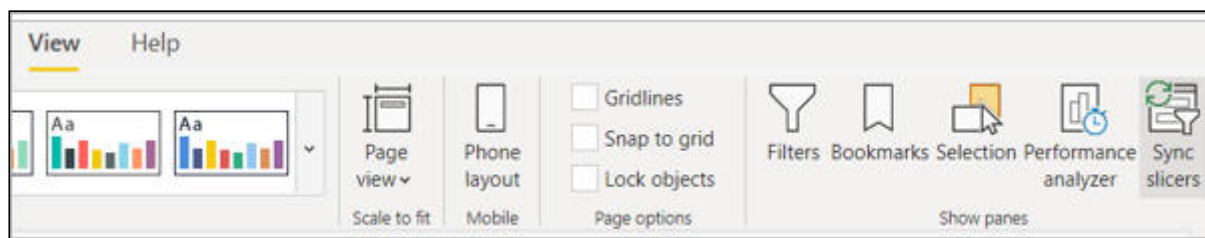

*You should be able to choose by continent and/or by country.*

Add in a slicer allowing you to choose the event date:

*The start and end dates should be set automatically for you.*

Using the **Sync slicers** pane, configure your report so that the slicers only appear on the first page, but apply to the other pages:

*Select this icon to synchronise your slicers.*

Check that your filtering works across pages, then save your report as **Synchronicity**, and close it down.
