Open the report in the above folder:

The report contains data on UK station usage in 2017-18, broken down by ticket type. The data is genuine!

Create a map showing the usage of stations for the region and passenger numbers chosen in the slicers:

*This is only a suggestion for how your map could look. Make sure you display the **Passengers** column on your chart, not the **Estimated Passengers** one.*

Add a tooltip field so that you can see which station you're looking at:

This shows that we are looking at Waterloo station (as it happens, the busiest station in the UK).

Add a table which shows the data for the pie chart slices you select:

Selected passenger numbers		
Station Name	**Ticket type**	**Passengers**
Liverpool Street	Sesason	30,783,146.00
London Bridge	Sesason	23,379,974.00
Waterloo	Sesason	40,831,994.00
Total		**94,995,114.00**

If you use the ⌈ Ctrl ⌉ *key to select these slices ...*

... you should see the season ticket travel for the 3 stations in question.

Save this report as **Meeting your Waterloo**, then close it down.
