Open the Power BI report in the above folder - it contains a card, a table of films and a chart:
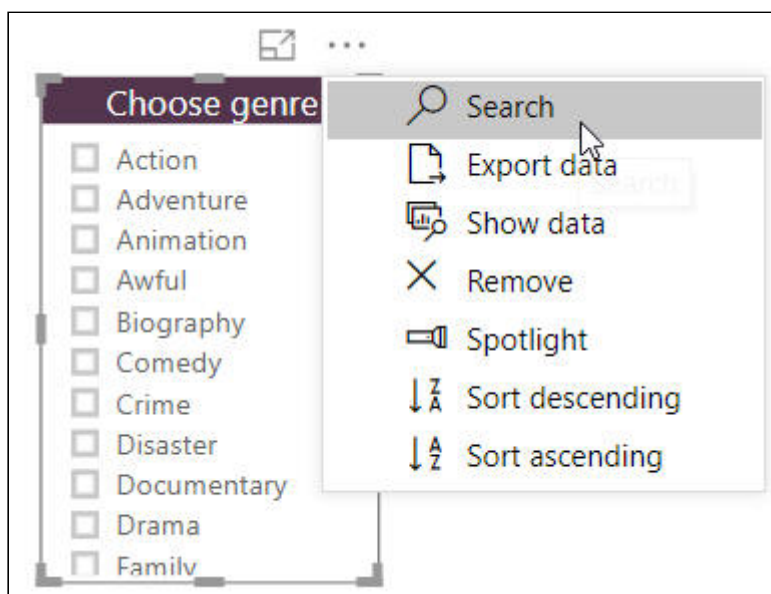

Number of films

1000

Initially you're seeing all 1,000 films in the underlying data source.

Apply a filter to the whole page so that you only see films which have won at least 2 Oscars (you can drag the **Oscars** field onto the **Page level filters** area of the field well):

Number of films

128
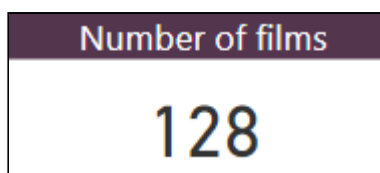

You should see that there are only 128 films which have won 2 or more Oscars (and the table and chart should update to show just these films).

Add a slicer allowing you to see only the films for a genre of your choice:

Choose genre   🔍 Search

☐ Action   📄 Export data
☐ Adventure
☐ Animation   �🗗 Show data
☐ Awful   ✕ Remove
☐ Biography
☐ Comedy   ⌷◻ Spotlight
☐ Crime   ↓ᶻₐ Sort descending
☐ Disaster
☐ Documentary   ↓ᴬᶻ Sort ascending
☐ Drama
☐ Family

htt

*Choose to search using your slicer, and type in **dr** which should be sufficient to allow you to choose the **Drama** genre.*

If you've done this correctly, you should see 24 as the number displayed in the card, and one of the world's dullest charts at the bottom of the page!

Save this report as **Sliced films**, then close it down.
